Subject: Request to Use Off-Spec Gypsum Materials for Quarry Reclamation

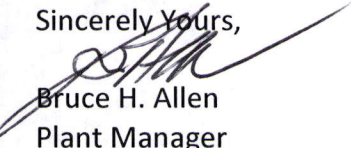

Dear Doug and John,

We request your written approval to use Off-Spec Gypsum Materials for Quarry Reclamation. The plant currently generates Off-Spec Gypsum materials which includes wallboard and Joint Treatment raw materials and finish product materials. We currently stage the Off-Spec Materials at the Off -Spec Gypsum Materials Pile, then haul it and place it in the approved Class IIIB landfill on the quarry site.

The plant requests that these Off-Spec Gypsum Materials be used as fill in quarried out areas as part of the approved State of Utah Reclamation Plan process. Once the Off-Spec Gypsum Materials are staged at the plant site, they will be hauled to the quarried out areas and then covered with quarry soil and rock materials and seeded. These areas will be reclaimed in accordance with the approved State of Utah Reclamation Plan for United States Gypsum, Sigurd Plant.

We request both Division of Solid Waste and UDOGM to provide us written approval to use Off-Spec Gypsum Materials as reclamation fill as part of the reclamation process. Please respond by September 15, 2010 and should you have any questions please don't hesitate to contact us.

Sincerely Yours,

Bruce H. Allen
Plant Manager
